DETAILED ACTION

Specification

1. The application has not been checked to the extent necessary to determine the presence of all possible typographical and grammatical errors. However, Applicant's cooperation is requested in correcting any errors of which he/she may become aware in the application.

Priority

2. Receipt is acknowledged of papers submitted under 35 U.S.C. 119(a)-(d), which papers have been placed of record in the file.

Claim Rejections - 35 USC § 102

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

4. Claim 1 is rejected under 35 U.S.C. 102(b) as being anticipated by Karema et al. (US 5,061,928). Karema et al. discloses a sigma-delta modulator apparatus (Fig. 1), comprising: component separating unit (A) separating a signal component and an error component of an input signal from each other (-Q1); a delta-sigma modulator (B) modulating the signal error component separated by the component separating unit (see the abstract and column 4, lines 47-51); and an output operating unit (including elements 13-16, and 21).

5. Claim 1 is rejected under 35 U.S.C. 102(b) as being anticipated by Ritoniemi et al. (US 5,629,701). Ritoniemi et al. discloses a sigma-delta modulator apparatus (Fig. 1), comprising: component separating unit (1) separating a signal component and an error component of an input signal from each other (e); a delta-sigma modulator (2) modulating the signal error component separated by the component separating unit (see the abstract and column 3, lines 58-62); and an output operating unit (including elements 3-6).

6. Claims 1, 6, 7, 10, and 11 are rejected under 35 U.S.C. 102(b) as being anticipated by Van Bavel et al. (US 4,862,169).

Regarding claim 1, Van Bavel et al. discloses a sigma-delta modulator apparatus (Figs. 1-2), comprising: component separating unit (12 of Fig. 1 and/or loop 23 of Fig. 2) separating a signal component and an error component of an input signal from each other ('Analog Error' or Fig. 1 and/or signal 'z' of Fig. 2); a delta-sigma modulator (14 of Fig. 1 and/or loop 24 of Fig. 2) modulating the signal error component separated by the component separating unit (see the abstract); and an output operating unit (including elements 16, 18, and 20 of Fig. 1 and/or elements 60,62,...70 of Fig. 2).

Regarding claims 6-7 & 11, Van Bavel et al. discloses the component separating unit (loop 23) includes: a quantizer (32) quantizing an analog input signal; a first digital to analog converter (DAC) (36) converting the signal component (Y1) provided from the first quantizer (via the delay 34) to analog signal; and an adder (40) adding the analog

input signal (the signal inputted between the delay 38 and quantizer 32) to the analog signal provided from the DAC (36).

Regarding claim 10, Van Bavel et al. discloses the apparatus including an attenuator (42) connected between the adder (40) and the delta sigma modulator (24).

Prior Art

7. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure (see the attached PTO-892).

Allowable Subject Matter

8. Claims 2-5 and 8-9 objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.
